Features of our ramps over which other brands do not have.

(1) **Improved design** for the ramps placed on the top which significantly reduces the chance of breakages.

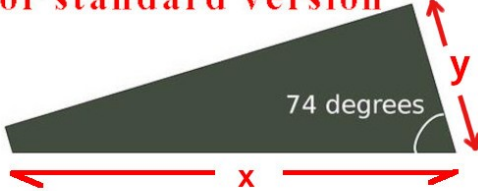

**Our variant design introduced in 2020 reduces the chance and extent of the breakage by at least 70%.
This is derived from observations from real life installation.
Our competitors do not have this feature.**

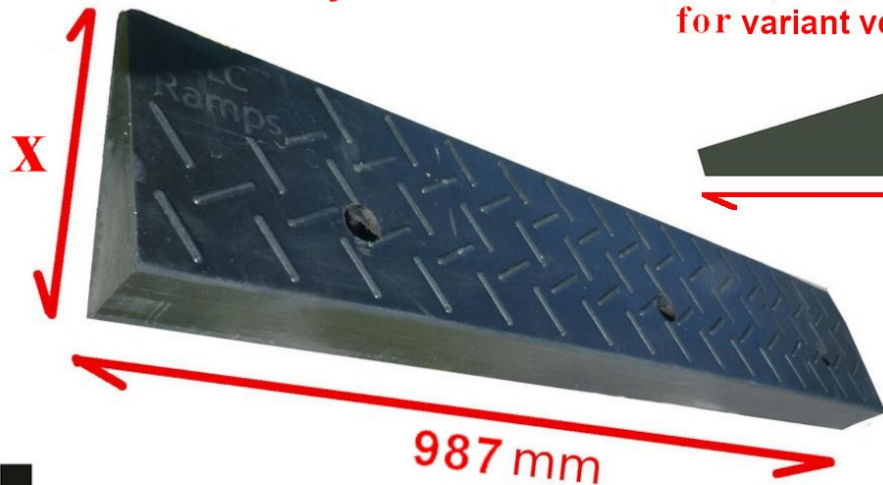

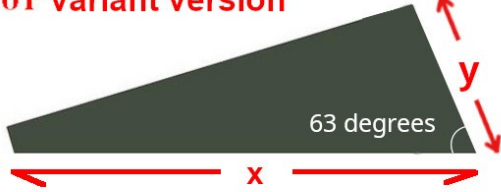

1 x Type L ramp
mainly for Layback kerbs
but applicable elsewhere

- Standard Version : x = 180mm
y = 64mm
- Variant Version : x = 193mm
y = 68mm

for variant version

(2) **Larger Stronger Fasteners** 12mm diameter

Our ramps are designed to be anchored by very strong 12mm concrete fasteners.

Our competition uses small 8mm ones.

Heavy trucks which run over the ramps can often bend the smaller fasteners.

**Strong
large
12mm
anchors**

**weak
and
small
8-10mm
anchors**

(3) **JLC Ramps** are made from the best recycled rubber in a process that minimises brittleness.
